8 **SEC. 2. FINDINGS.**

9 Congress finds the following:

10 (1) A cancer survivor is any individual with a  
 11 history of cancer, from the time of diagnosis through  
 12 the rest of their life, across the continuum of care.

13 (2) Today, there are approximately 18,000,000  
 14 Americans who are cancer survivors, and the num-  
 15 ber of survivors is projected to reach 26,000,000 by  
 16 2040. Therefore, there is a great need to be able to  
 17 provide ways to sustain the care needed and to offer  
 18 those living with, through, and beyond cancer a safe,

1 supportive, and accommodating environment where  
2 such individuals can engage in physical and social  
3 support activities to sustain optimal quality of life.

4 (3) Cancer survivors face difficult emotional,  
5 psychological, neurological, financial, legal, and other  
6 physical challenges that persist beyond diagnosis and  
7 treatment, often arising months and years after ac-  
8 tive cancer treatment ends.

9 (4) Cancer survivors have unique needs and  
10 must manage short- and long-term effects of their  
11 treatment, as well as regular screenings for cancer  
12 recurrence or new cancers.

13 (5) Cancer survivors of racial and ethnic diver-  
14 sity, as well as lower socioeconomic status, have dis-  
15 proportionately lower health-related, quality-of-life  
16 scores compared to non-Hispanic White cancer sur-  
17 vivors.

18 (6) Cancer survivors living in rural areas have  
19 less access to services and have poorer outcomes  
20 than survivors in metropolitan areas.

21 (7) Children, adolescent, and young adult can-  
22 cer survivors are particularly susceptible to long-  
23 term consequences from treatment, and up to 80  
24 percent have a severe, disabling, life-threatening, or  
25 fatal health condition by the age of 50. Best prac-

1 tices in this area would improve treatment, quality  
2 of life, and long-term health outcomes.

3 (8) Clinical trials have shown that cancer survi-  
4 vorship programs help cancer survivors meet or ex-  
5 ceed the recommended amount of physical activity,  
6 significantly increasing their cardiovascular health  
7 and overall quality of life and decreasing their can-  
8 cer-related fatigue.

9 (9) Despite the National Cancer Institute and  
10 other professional organizations' definition of a can-  
11 cer survivor beginning on the day of a cancer diag-  
12 nosis, there is little agreement among clinicians, re-  
13 searchers, and insurance companies on what services  
14 are included in "survivorship care" and the point at  
15 which "survivorship care" begins.

16 (10) Cancer survivors, their families, their care-  
17 givers, and their providers face many difficulties un-  
18 derstanding and coordinating the transition from  
19 specialty to primary care, and for this reason com-  
20 munication and treatment are often fragmented and  
21 inconsistent.

22 (11) To avoid additional health-related or finan-  
23 cial hardships to cancer survivors and their families,  
24 comprehensive and forward-thinking cancer survivor-  
25 ship studies and programs across Federal agencies,

1 in collaboration with States, localities, and medical  
2 and professional organizations, are required to en-  
3 gage in a coordinated effort to improve health out-  
4 comes and quality of life of survivors.

12 to Congress a report containing a description of such  
13 model that includes the following information:

14 (1) A description of what event would trigger  
15 an individual's entry into such a model (such as the  
16 end of the individual's active cancer treatment, the  
17 beginning of the individual's need for supportive  
18 care during active treatment, or another event).

19 (2) The length of the individual's participation  
20 under such model, including a description of any  
21 ability to extend such participation.

22 (3) In the case that such model is based on an  
23 episode of care, the appropriate length of the survi-  
24 vorship episode of care and whether additional epi-  
25 sodes may be triggered, if necessary.

1           (4) Strategies to ensure that any episode of  
2 care under such a model begins with the develop-  
3 ment and dissemination of a survivorship care plan  
4 for the transition from active cancer treatment to  
5 follow-up care to the individual and all relevant  
6 health care providers.

7           (5) A description of any bundled payment pack-  
8 ages that will be used under such model.

9           (6) A specification of any follow-up or new  
10 screening under such model for unmet needs of indi-  
11 viduals participating in such model.

12           (7) How consistent, shared decision making will  
13 be promoted under such model so that individuals  
14 are given the knowledge needed for self-management  
15 between episodes of care.

16           (8) A specification of which types of health care  
17 providers may furnish items and services under such  
18 model, including genetic counselors and mental  
19 health professionals.

20           (9) Strategies for applying evidence-based risk  
21 stratification principles to direct survivors to person-  
22 alized care pathways that match the level of care  
23 needed to the relative risks and needs of the sur-  
24 vivor.

1           (10) Strategies for coordination of care between  
2 such providers, such as between specialists and pri-  
3 mary care providers, and how principal responsibility  
4 will be assigned for an episode of care.

5           (11) Strategies for addressing social deter-  
6 minants of health through such model.

7           (12) A description of how such model will pro-  
8 mote—

9                   (A) prevention, early detection surveillance,  
10 and treatment for individuals continuing to re-  
11 ceive systemic therapy after the end of active  
12 cancer treatment;

13                   (B) such individuals' understanding of,  
14 and access to, treatment;

15                   (C) survivorship research; and

16                   (D) the continuing health of cancer sur-  
17 vivors.

18           (13) An analysis of how different forms and  
19 stages of cancer may require the development of dif-  
20 ferent survivorship plans and alternative payment  
21 models based on varying episodes of care.

22           (14) A plan for testing any alternative payment  
23 model described in the report, including the timing  
24 of such testing, an analysis of the impact of such  
25 testing, any barriers to implementing such testing,

11                   viding cancer survivorship navigation serv-  
12                   ices, or a patient-focused navigation benefit  
13                   that survivors could utilize in different set-  
14                   tings, with the navigation services meeting  
15                   standards set by the Secretary; and

16                   (ii) services funded through the Medi-  
17                   care and Medicaid programs.
